# Project Narrative

## PROJECT INFORMATION

The project consists of the construction of a 10-level condominium structure. The new development will have a footprint of about 75 by 180 feet, and will rise to a maximum elevation of +158 feet NGVD. A single level basement is also planned for the development, with an anticipated finished floor elevation of 14'-2" feet NGVD. The underground parking garage will have approximate measurements of 246 feet in the east-west direction, and up to 94 feet in the north-south direction. The footprint of the garage structure is anticipated to be roughly 22,000 square feet. The new structure will be constructed about 20 feet south of the northern boundary of the site. The southern portion of the undeveloped land will include a lap pool, while the northwest portion will provide access to underground parking.

## REMOTE VIBRATION MONITORS

A total of fourteen (14) vibration monitors have been installed at this time. The units run continuously for a 24-hour period, with the exception of a short period of time to allow for the devices to download the data collected during the day. The location and identification of each device is presented in the table below and shown graphically on the map. A graph will be displayed for each monitor showing the data point collected during the specified time period. This report will display the historical data and data collected from the week of this report.

The vibration monitors were installed on the dates as listed in the table below:

Installation Date	Location/Name of Vibration Monitor	Serial Number of Vibration Monitor

## REVIEW OF VIBRATION MONITORING DATA

The following definitions identify the wording that will be used in the report to describe the vibration readings:

- Longitudinal: a vibration measurement in the axis in line with the vibration source (back and forth).
- Transverse: a vibration measurement in the axis perpendicular to the vibration source (side to side).
- Vertical: a vibration measurement in the vertical axis (up and down).
- Peak Particle Velocity (PPV): movement within the ground of molecular particles. This is not related to surface movement.

## THRESHOLD EXCEEDANCES

A vibration level threshold limit of 0.50 in/sec is being used for the project, with trigger alerts set at 0.30 in/sec, or 60 percent of the established threshold level. Listed below are the instances when the seismographs have exceeded the established threshold limit of 0.50 in/sec.:

Notes:

<sup>1</sup> Digging with backhoe near geophone.

<sup>2</sup> Movement of debris on-site with excavator near geophone.

<sup>3</sup> Demolition of the sea wall near geophone.

<sup>4</sup> Demolition of asphalt with excavator near geophone.

<sup>5</sup> Digging and moving materials with backhoe near geophone.

<sup>6</sup> Excavator moving construction debris near monitor.

<sup>7</sup> Monitor inadvertently bumped during inspection of the VM equipment.

<sup>8</sup> Excavator moving in close proximity to VM equipment.

<sup>9</sup> Unit was bumped into during excavation activity. No damage was caused but resulted in a disturbance of the readings at this time.

<sup>10</sup> VM system was relocated by a subcontractor on-site while the unit was monitoring.

<sup>11</sup> Excavation activity in the vicinity of the vibration monitoring unit.

<sup>12</sup> Excavation activity in the vicinity of the vibration monitoring unit.

<sup>13</sup> Readings from the VM equipment began showing exceedances only in the transverse axis starting on 4/11/2023. No exceedances occurred on any other units, including the systems onsite. Many of these occurrences occurred after/before working hours on-site. A physical inspection of the system was performed on 4/12/2023, with no obvious signs of physical disturbance or damage to the equipment. Due to the continued exceedances, a new system was installed on 4/19/2023.

<sup>14</sup> Exceedance was due to installation of a monitoring point by the survey contractor near the system.

<sup>15</sup> Exceedance was due to container and track hoe disturbing the vibration monitoring unit.

<sup>16</sup> Exceedance was due to the system being relocated by the contractor while the unit was still operating.

<sup>17</sup> Exceedance was due to the re-installation of the system in a new position identified by the client.

<sup>18</sup> Exceedance was due to underpinning activity in close proximity to the VM system.

<sup>19</sup> Exceedance was due to heavy equipment being moved in the vicinity of the VM system.

<sup>20</sup> At the time of this event, loading/unloading activity was taking place with the crane in the drive lane next to the site. None of the other VM systems in the vicinity show similar readings around the time of this event.

<sup>21</sup> Exceedance was caused by lightning events in the close vicinity of the VM system.

<sup>22</sup> Exceedance was caused by excavation/demolition nearby the VM system.

<sup>23</sup> Exceedance was caused by soil mixing operation near the VM system.

<sup>24</sup> Exceedance was due to service of VM system by technician.

- <sup>25</sup> Exceedance was caused by excavation activity for soil mixing.
- <sup>26</sup> Exceedances were caused by foot traffic of personnel in close vicinity of the VM system.
- <sup>27</sup> Exceedance was caused by foot traffic of personnel in close vicinity of the VM system.
- <sup>28</sup> Exceedance was caused by soil mixing activity.
- <sup>29</sup> Exceedance was caused by soil mixing activity.
- <sup>30</sup> Exceedance was caused by material placement in close vicinity of the VM system.
- <sup>31</sup> Exceedance was caused by a track hoe operating/moving in close proximity to the VM system.
- <sup>32</sup> Exceedance was caused by equipment operating/moving in close proximity to the VM system. Per request by the client, the system was relocated away from this activity to prevent damage to the system. System was tested following re-installation.
- <sup>33</sup> Exceedance was from an inadvertent bump caused during maintenance of the system.
- <sup>34</sup> Exceedance was due to the system being bumped by contractor moving materials.
- <sup>35</sup> Exceedance was caused by placement of material nearby VM unit.
- <sup>36</sup> Exceedance was caused by an adjustment to the VM cabinet.
- <sup>37</sup> Exceedance was caused by physical disturbance of the VM system by personnel on-site. This disturbance also resulted in damage to the equipment by severing the geophone cable. A replacement system was installed on 12/20/2023 and the cabinet was relocated to prevent further disturbance.
- <sup>38</sup> Exceedance was due to pile drilling in the vicinity of the VM system.
- <sup>39</sup> Exceedance was caused by disturbance of the geophone by electrical work on adjacent property. The geophone was fully removed from the ground by the workers. The system was re-established around 1-2 hours following this event.

#### DATES WHEN VIBRATION DATA WAS NOT RECORDED

Below is a table of dates when readings were not recorded on the vibration monitor, along with the cause of the reason for each occurrence.

Date	Vibration Monitor (VM) Name/Location

<sup>1</sup>This unit was inspected and adjusted following the relocation performed by another contractor on 3/29/2023. Following the adjustment of the unit setup, the unit was tested, but was not returned to active monitoring. This was noted and corrected on 4/3/2023.

<sup>2</sup>Communication issues with units were resolved and data from the systems is included on this week's report. There was no loss in data for these systems.

<sup>3</sup>Unit lost power due to a loose wire causing failure of charging to the battery. The battery was swapped and the wiring issue was corrected.

<sup>4</sup>Unit started showing a failure in communication on 7/20/2023. This system was inspected on 8/2/2023. Unit was in operation and all data was collected from the system. Communications were also tested and improvements were made at this time.

<sup>5</sup>Unit was showing low power at the time of the past report. The battery for the system was replaced on 8/2/2023 and all data since the previous report has been uploaded. There was no data loss from the system.

<sup>6</sup>Following the testing/inspection of these systems on 8/2/2023, the units were not returned to normal operation. This was noted and corrected on 8/3/2023.

<sup>7</sup>Unit lost power on 9/4/2023. The battery for the system was replaced on 9/6/2023 and the system was returned to normal operation.

<sup>8</sup>Communication with to this system was restored on 9/15/2023. The VM system was operating normally, and all monitoring data was collected once communications to the system were restored. Data tables have been updated to include all data from the system.

<sup>9</sup>Unit lost power on 11/12/2023. The battery for the system was replaced on 11/13/2023 and the system was returned to normal operation.

<sup>10</sup>Unit has shown a loss of power and will require a replacement battery to re-establish communication to the system. This work is scheduled to take place on 11/29/2023. At this time any data from the system will be collected and all data from the unit will be included on the following report.

<sup>11</sup>Unit required replacement due to damage resulting from physical movement of materials nearby the VM cabinet. A replacement system was installed on 12/20/2023 and the cabinet was relocated.

<sup>12</sup>The modem to the system was damaged due to insects shorting out the modem. The modem to the system was replaced on 1/9/2024 and the system was restarted.
